# SECURITY AWARENESS TRAINING

Almost 30% of all successful cyber attacks stem from phishing emails. Even companies with a strong security program can easily fall victim to a phishing attack. Why? Because your staff are your first line of defense. Phishing attacks target employees by mimicking legitimate emails which ask for confidential information such as login credentials.

The reality is that a well trained employee can spot these emails before they become an issue. Security awareness training from Hoop5 can help to bolster your first line of defense and protect your business from malicious attacks.

## HOW IT WORKS

We play cybercriminal and setup a phishing email campaign

Send to your staff and see who falls for the "attack"

Track campaigns over time to see staff improvement

## HERE TO HELP.

Hoop5's Security Awareness Training provides the continuous, relevant, and measurable testing and education businesses need to minimize risky user behaviors and resulting security incidents to achieve cyber resilience. Our Security Awareness Training is easy to initiate and with real-time threat intelligence, our customers can rest assured that all courses are up to date and relevant.
